

## LORU1601 Obelix Module - Receiver Control CAN3 External LINK

The LORU1601 is an Obelix Mining PLC Processor module is used for legacy mobile mining machinery control and automation applications that are programmed and maintained by Pempek automation software developers.

The LORU1601 model does not provide an AS4871-compliant clock/memory retention battery and is therefore not suitable for new machine automation designs.

In addition to sixteen (16) local digital inputs (24VDC); the module provides a number of field bus options - including CAN (4), RS-422 (4) and RS-232 (1).

The module also supports Pempek CAN Fibre ports (8 channels) for convenient, reliable control and monitoring of Obelix Mining PLC IS I/O modules. Two (2) CAN channels are shared with Fibre Ports (distributed with 4 ports each).

A built-in radio data receiver directly supports radio remote control applications.
